Cybersecurity for CCTV Systems

Course code: SC211 From: 27-07-2026 Venue: Bangkok (Thailand) - Course Fees: 5250 £

Cybersecurity for CCTV Systems is a comprehensive training program designed to equip security professionals, IT personnel, and CCTV system administrators with the knowledge and skills needed to secure CCTV systems against cyber threats. With the increasing integration of CCTV systems into networked environments, understanding and implementing robust cybersecurity measures is crucial to protect sensitive data and maintain system integrity.

Course Objectives of Cybersecurity for CCTV Systems

By the end of this training course, the participants will be able to:

- Understand the cybersecurity landscape as it relates to CCTV systems.
- Identify common vulnerabilities in CCTV systems.
- Implement best practices to secure CCTV cameras, recorders, and network infrastructure.
- Develop incident response plans for cybersecurity breaches.
- Comply with legal and ethical considerations in CCTV cybersecurity.

Course Methodology of Cybersecurity for CCTV Systems

The training program combines theoretical sessions, practical exercises, hands-on lab work, and interactive discussions to ensure a comprehensive learning experience. Participants will have the opportunity to apply their knowledge in real-world scenarios and engage in practical exercises to reinforce the concepts learned. The training program emphasizes a practical and hands-on approach to enhance participants' ability to apply the acquired skills in their professional roles.

Who Should Attend

This training course is a suitably wide range of professionals but will significantly benefit:

- Security professionals responsible for CCTV system management.
- IT personnel tasked with securing networked CCTV systems.
- CCTV system administrators and operators.
- Anyone interested in enhancing their knowledge of CCTV system cybersecurity.

Course Outline

Day 1: Introduction to CCTV Cybersecurity

- Overview of the course
- Importance of CCTV system security
- Cybersecurity fundamentals
- Threat landscape for CCTV systems

Day 2: Identifying Vulnerabilities

- Common vulnerabilities in CCTV systems
- Physical security considerations
- Network vulnerabilities
- Access control and authentication weaknesses

Day 3: Securing CCTV Components

- Best practices for securing cameras
- Hardening digital video recorders (DVRs) and network video recorders (NVRs)
- Network security for CCTV
- Encryption and data protection

Day 4: Incident Response and Monitoring

- Developing an incident response plan
- Recognizing and responding to cybersecurity incidents
- Monitoring and auditing for security
- Security testing and assessments

Day 5: Legal and Ethical Considerations

- Legal regulations related to CCTV and privacy
- Ethical considerations in CCTV cybersecurity
- Reporting security breaches and compliance
- Course recap and final assessment
