Human Capital Analytics

Course code: HR60 From: 24-08-2026 Venue: Amsterdam - Course Fees: 5150 £

Introduction

If you want your team, organization, or career to grow, you can no longer make decisions based solely on credit or experience - you must ensure that data is in the driver's seat when it comes to future planning. Using behavioral data to acquire and manage organizations has fundamentally altered how businesses operate. Through discussion and hands-on activities with real-world data and devices, this course will provide delegates with a foundation in people analytics.

This course will highlight:

- People management
- How behavioral economics can reinvent HR
- Data-driven people management for developing performance

Course Objectives of Human Capital Analytics

There are essential questions that influence businesses, that no one can answer:

- How much does the managing team interact with engineering?
- Is a manager wasting time with their team?
- How often should a salesman talk to customers?

The reason we can't answer these issues is a lack of data.

Surveys and consultants are helpful, but their shortcomings are evident. They're inactive, subjective, and don't measure what happens in the real world.

- Utilizing real-world data to judge what is occurring
- Knowing what behavioral data you now have and how to do it
- Acquiring basic people investigation techniques for HR dynamics
- HR data-driven for bodies management and competency estimation
- How behavioral economics can reinvent HR and create savings
- Data-driven people management for enhancing performance

Course Methodology of Human Capital Analytics

This course will use a variety of proven adult training methods to assure maximum knowledge, comprehension, and retention of the information displayed.

This course Methodology covers:

- Interactive case studies individually planned for the representatives
- Videos
- Analysis and evaluation of the latest methods
- Hands-on, functional exercises assuming actual project scenarios
- Pre - & Post-Course Assessments

Organizational Impact of Human Capital Analytics

Managers who have learned to lead, manage, and plan to utilize data-driven techniques will have new and better ways of presenting their key leadership functions. They will offer improved decision-making, innovation, adaptability, and confidence. They are better prepared to stand back from the everyday part and focus on real-world organizational needs, secure in the understanding that their actions and choices are based on sound data.

Personal Impact of Human Capital Analytics

Shareholders will be exposed to a range of different ways of leadership and management training utilizing data and the latest thinking.

This will enable them to improve their business skills and knowledge in challenging situations.

The chance to experiment with new management methods before implementing them in the workplace will help raise the confidence to move beyond established assumptions about the "right" way to manage and lead.

Target Audience of Human Capital Analytics

This course is ideal for directors, superior managers, officials, and business managers in all commerce who have (or want to have) responsibility for developing organizational performance.

- Those who want to improve their knowledge of leadership, management, and communication
- Those who are viewing for business gains and advantages from managing their teams more efficiently
- Leaders and managers qualified for working through others to accomplish company objects
